Prepared by ZNAS for Anequim · July 2026

# Anequim One Portal

## Estimated Value of the Software as an Addition to Anequim's IP

Anequim One includes a proprietary, client-facing software portal that ZNAS is building specifically for Anequim's customers. Beyond powering the product day to day, this portal becomes a durable, ownable technology asset on Anequim's balance sheet. This document estimates that asset's market value, grounded in current 2026 industry benchmarks.

### ESTIMATED MARKET VALUE OF THE PORTAL AS AN IP ASSET

**$200,000 – $350,000**

Based on 2026 replacement-cost and market-comparable benchmarks (sources on page 2)

### How we arrived at this range

We triangulated the value three independent ways. All three land in the same band, which gives us confidence in the estimate.

**1 What it would cost to build from scratch (replacement cost)**

Independent 2026 industry data on custom software puts production-grade SaaS platforms at $150,000–$400,000, and enterprise client portals at $100,000–$300,000, with multi-tenant architecture (one platform serving many separate client companies) adding a 25–40% premium. Clutch's verified 2026 review data shows an average custom software project of roughly $132,000 over about 13 months. The Anequim One portal is multi-tenant across your client base, spans eight-plus functional modules, handles real-time interaction data and resident PII, and requires custom integration work — placing it firmly in the $200,000–$350,000 replacement range.

**2 What comparable capability would cost to license (value in use)**

Comparable AI-enabled platforms in property management are sold as ongoing subscriptions, not owned assets. Enterprise AI resident-communication platforms price around $300–$600 per community per month, and property-management AI voice/receptionist services run roughly $400–$800 per month. Across your ~15 client companies, licensing equivalent capability would cost on the order of $54,000–$108,000 every year — indefinitely, with no ownership at the end. Owning the portal converts that recurring outflow into a one-time, appreciating asset.

**3 What owning software does for Anequim's enterprise value (strategic value)**

Proprietary software changes how a company is valued. M&A benchmark data covering 600+ transactions (2015–2025) shows IT and services businesses trading at roughly 1.3x revenue, while software companies trade at around 3.0x revenue, with recurring-revenue software reaching substantially higher. Owning the Anequim One portal moves Anequim toward that higher-value, tech-enabled profile — an advantage that compounds well beyond the portal's build cost.

### Why this is achievable in months, not years

The market benchmark for a platform like this is roughly 13 months of development. ZNAS delivers it in 6 months by building on MemQL, our production-grade AI application platform, and an AI-accelerated engineering process. Anequim gets a market-value software asset on a compressed timeline — without sacrificing the quality or scope that the value estimate above is based on.

**Bottom line: the Anequim One portal represents an estimated $200K–$350K technology asset that becomes part of Anequim's intellectual property — delivered in a fraction of the usual time.**

### Research sources & methodology

This estimate is based on published 2026 market data, not internal assumptions. Primary sources consulted:

**Custom software & SaaS development cost benchmarks (2026)**
Kavara, SaM Solutions, Saigon Technology, Clockwise Software, Andersen — kavara.dev, sam-solutions.com, saigontechnology.com, clockwise.software

**Verified project cost & timeline averages**
Clutch 2026 software development review data

**Property-management software pricing**
AppFolio and Buildium published pricing pages (2026)

**AI receptionist / resident-communication pricing**
EliseAI market data; Vellum, Layer3Labs, and Retell AI 2026 market surveys

**Valuation multiples (services vs. software)**
Aventis Advisors M&A multiples study (600+ transactions, 2015–2025)

Methodology note: figures represent an estimated fair-market value range for the portal software as an intellectual-property asset, triangulated across replacement cost, comparable-license (value-in-use), and strategic-value methods using the sources above. Final value depends on the confirmed v1 feature scope, which is being defined collaboratively with Anequim. This estimate is provided for planning and discussion purposes and is not a formal third-party appraisal.
