This is what

ZNAS can do

for Alebrije

Fractional CTO & Digital Transformation

Alebrije 741 Wellness Padel Club

An exclusive proposal for Alebrije 741

ZNAS LLC | April 2026 | Confidential

.01 · Vision

Alebrije has a solid business.
This proposal is about what it can become.

Alebrije has 13 courts, a restaurant, café, bar, sports academy, and an active client base. The business works, but it's operating below its potential because it doesn't yet have the digital infrastructure to see, understand, and act on what's really happening in its operation.

Today, the global sports industry is undergoing a transformation. Clubs that are adopting technology and artificial intelligence aren't just operating more efficiently. They're creating experiences their clients can't find anywhere else, making decisions based on real data instead of intuition, and positioning themselves years ahead of their competitors. In Mexico, that transformation is just beginning. And that's where the opportunity lies.

What ZNAS proposes for Alebrije is a comprehensive technology restructuring for the era of digitalization and artificial intelligence. This isn't about installing software or hiring a programmer. It's about rethinking how the club operates from the ground up: building the infrastructure that provides total visibility into internal operations and the relationship with every client, implementing intelligent systems that work proactively, not waiting for instructions, and creating a future-proof technology strategy that positions Alebrije as a reference in the Mexican market; additionally **a proprietary technology product,** an asset that belongs to the club, that differentiates it from any competitor, and that is replicable.

That's what's on the table. And what makes this moment so important is that being one of the first premium clubs in Mexico to execute this transformation correctly doesn't just improve operations. It positions Alebrije with a 2 to 3 year competitive advantage over competitors who still haven't moved. In a market growing as fast as padel in Mexico, that window won't stay open forever.

> **This proposal details exactly how we'd accomplish it.**

.02 · What Alebrije Gets

At the end of this project, Alebrije walks away with two things.

1 Comprehensive Technology Restructuring

A comprehensive technology restructuring advance and plan, designed specifically for Alebrije based on a diagnosis of its actual operations and the results it's looking for. This is not a generic solution. It's the infrastructure that connects every unit of the club into a single intelligent system: courts, restaurant, academy, events, clients, with AI that works proactively. CRM, analytics, automated marketing, intelligent bookings, and a 12-month strategy. Everything built in collaboration with your leadership team and under your approval at every stage.

2 Proprietary Technology Product

A proprietary optimization algorithm that José Sanz designs and begins building during the 3 months. This algorithm belongs 100% to Alebrije, is the intelligent engine behind the integrated system, is replicable, and is the differentiator no competitor has. Alebrije doesn't just walk away with new tools, it walks away with proprietary intellectual property.

.03 · The Full Roadmap

The complete vision: a ~12-month project

The full technology restructuring of Alebrije, from assessment through complete implementation of the integrated system, the proprietary algorithm, and all systems running at capacity, is estimated at approximately **12 months** with José Sanz and his ZNAS team.

The 3 months of this engagement are not the entire project. They are the **headstart**, the launch where José Sanz advances as much as possible: diagnoses, plans, and begins implementing the highest-impact projects. The 12-month roadmap he delivers covers the entire project through completion.

.03 · Roadmap: Phases

Phase 1: Comprehensive Assessment

Before proposing anything, José Sanz needs to understand your business thoroughly.

- Complete technology audit of everything Alebrije uses today
- Interviews with your key operations team
- Operational flow analysis for each business unit
- Data assessment: what exists and what should exist but doesn't
- Benchmarking against competitors and global reference clubs
- AI readiness assessment and technology platform recommendations, evaluated transparently and compared against market alternatives

DELIVERABLE

Complete Technology Assessment Report, presented to your leadership for review and approval.

Independent market value: $3,000-$5,000 USD

Phase 2: Digital Transformation Plan

With the assessment in hand, José Sanz delivers the complete vision.

SHORT TERM

Highest-ROI quick wins, functional website with SEO, CRM implemented, first proprietary client data.

MEDIUM TERM

Mature CRM with automation, AI implementations (customer service agent, predictive analysis, dynamic pricing), real-time dashboard, AI-powered integrated operating system, and Alebrije's proprietary algorithm outlined in the roadmap as the optimization engine.

WHY 12 MONTHS AND NOT 5 YEARS?

Because technology, especially AI, moves so fast that a 5-year plan would be obsolete before it's finished being written. A responsible roadmap is 12 months with quarterly reviews.

DELIVERABLE

Alebrije Digital Transformation Plan 2026-2027

Market value equivalent (Accenture / Deloitte): $25,000-$60,000 USD

Phase 3: Implementation & Onboarding

We select the highest-impact projects and execute them directly. Candidates:

- **Intelligent booking system**: conversational agent via WhatsApp that confirms, charges, and books in seconds
- **CRM with real client database**: for the first time, knowing who the most valuable clients are and when they're at risk of leaving
- **AI-powered metrics dashboard**: occupancy, revenue, retention, trends, all in real time
- **Digitally optimized website**: functional web presence with SEO so Alebrije is visible in online searches
- **Automated marketing**: personalized communication based on actual client behavior
- **Design and initial development of Alebrije's proprietary algorithm**: José Sanz begins the design and first iterations of the optimization algorithm during the 3-month headstart, with full development continuing in the following months of the roadmap
- **AI-integrated operating system**: single platform where all operations converge with a proactive AI layer

DELIVERABLE

Projects running in production + documentation + team training + Continuity Plan for months 4-12

.04 · The Comparison

Why the scenario matters as much as the decision

The end result of the project is the same in any scenario: Alebrije technologically restructured with its proprietary algorithm running. What changes dramatically is **how long it takes to get there**. And in a market where speed defines who leads, that changes everything.

José Sanz + ZNAS team	Option 2	~12 months	Maximum headstart: assessment + plan + multiple projects implemented. Team is already synchronized and AI-powered, accelerated progress from day 1
José Sanz + Alebrije's team	Option 1	~18-24 months	3 months spent more on getting to know the team, evaluating capabilities, aligning them. Less implementation, more onboarding. The roadmap stretches because the team lacks the AI methodology and speed of the ZNAS team
Without José Sanz / generic CTO	-	~3-5 years	First 3 months would be just recruiting the CTO and team. Without specialized AI leadership, the project runs on conventional methodologies. High risk of losing relevance and momentum before completion

Why is the difference so large?

A case documented by McKinsey in April 2026 reported that AI-powered teams achieve development speeds up to 10x faster at half the cost. José Sanz and his team are AI orchestrators. Each member amplifies their experience with the most advanced models on the market. This isn't using a code copilot occasionally. It's a work methodology where AI is integrated into every stage: design, development, testing, deployment.
Source: McKinsey, "The AI revolution in software development"

On the other hand, recruiting a team of 3 senior developers in Mexico takes 2-3 months and costs $198,000-$270,000 USD/year. A traditional consultancy charges $25,000-$60,000 USD just for the strategic plan without implementing anything, and the typical full process to tangible results is 9-18 months at a cost of $150,000-$400,000 USD.

> **The real advantage isn't just that José Sanz is good. It's that José Sanz + AI is a multiplier that compresses years into months. And in a market where being first grants a 2-3 year advantage, every month counts.**

.05 · Who Leads This Project

José Sanz

17+ years in technology | Founder, ZNAS LLC | Co-founder, Visionarys

Software architect with a track record in real-scale systems: Afni, Amadeus IT Group (global airlines), CyraCom International (12 years, platform processing millions of minutes). Founder of ZNAS LLC and co-founder of Visionarys. Creator of CoPresent and MemQL. MIT Certification in AI Business Strategy. Native bilingual.

José Sanz doesn't advise on AI. He builds and deploys it in real production. Both he and his team operate as **AI orchestrators**: each member amplifies their experience with the most advanced AI models on the market, multiplying delivery capacity, quality, and speed.

What you'll have from José Sanz:

- Executive technology leadership: José Sanz proposes, substantiates, and executes. You authorize and give the green light on every implementation decision
- Direct execution: writes code, deploys systems, delivers working results
- Regular progress reports
- Training and knowledge transfer
- Clear continuity plan at the end of the engagement

.06 · Your Investment

OPTION 1

Fractional CTO

$45,000 USD / 3 months

$15,000 USD/month | paid at start of each month

- José Sanz as dedicated CTO, 25 hours per week
- Progress within all 3 project phases: Assessment, Plan, Implementation. The specific scope will be determined once the working arrangement is defined and the comprehensive company assessment is completed
- 12-month roadmap + documentation + training + continuity plan
- Up to 2 on-site visits/month to Guadalajara

Requirement: Alebrije provides a dev team for Phase 3

Full project timeline: ~18-24 months

Projects in 3 months: 1-2

OPTION 2

CTO + ZNAS Team

$58,000 USD / 3 months

$19,333 USD/month | paid at start of each month

Everything in Option 1, plus:

- **ZNAS development team: AI orchestrators** already integrated with José Sanz, no learning curve
- **Dedicated Account Manager**: always-available point of contact
- **Significantly faster execution**: more projects implemented, higher quality, lower risk

Full project timeline: ~12 months

Projects in 3 months: 3-4+

Maximum progress from day 1

Alebrije doesn't have its own developers today. With Option 1, José Sanz would lead, but whom? Hiring developers takes time and carries risk. With Option 2, you arrive with a complete team from week 1.

CONCEPT	OPTION 1 ($45K)	OPTION 2 ($58K)
Fractional CTO (José Sanz)	25 hrs/week	25 hrs/week
Assessment + Plan + Implementation	Yes	Yes
Development team included	Requires Alebrije's team	ZNAS team
Dedicated Account Manager	-	Yes
Alebrije's proprietary algorithm	Yes (longer timeline)	Yes (accelerated timeline)
Full project timeline	~18-24 months	~12 months
Projects implemented in the 3 months	1-2	3-4+

.07 · Return on Investment

What's at stake

The following data points are benchmarks from the sports and digital transformation industries, not specific projections for Alebrije. The actual numbers for this business will be calculated during the Phase 1 Assessment, which is exactly where the specific potential of each initiative is determined.

CRM + Automated Marketing

Churn reductions of up to 5% translating into significant revenue recovery

Dynamic Pricing

15-30% increases in revenue per facility

SEO + Digital Presence

Sustained organic acquisition at no cost-per-click

24/7 AI Agent

Operational load reduction + total availability of service

Real-time Analytics

Transition from intuition-based to data-driven decision making

Proprietary Algorithm

Continuous operations optimization + competitive differentiator + replicable across new locations

According to data reported by Playtomic and sports industry analysis, clubs with consolidated digital infrastructure report significant increases, between 3x and 5x, in revenue per facility compared to clubs without a digital presence.

The specific numbers for Alebrije will be determined in the assessment. Phase 1 is exactly where José Sanz analyzes the club's actual operations, quantifies the opportunities, and establishes concrete return projections based on real data, not generic estimates.

> Beyond the numbers: being one of the first premium clubs in Mexico positioned with AI and a proprietary optimization algorithm gives you a competitive advantage that goes beyond efficiency. It's an asset that grows in value with every day of operation.

.08 · Engagement Terms

Payment
Fixed monthly retainer, at the start of each month.

Currency & Billing
USD | ZNAS LLC (Arizona, USA) | Wire transfer

Dedication
25 hours per week: strategic work, technical work, meetings, coordination, and travel.

Travel
Up to 2 on-site visits/month to Zapopan. All travel expenses (flights, lodging, ground transport, meals) are covered by the client, billed at actual cost with no markup, with receipts.

Out of Scope
$200 USD/hour.

Termination
30 days' notice by either party.

Late Payment
ZNAS may pause work if payment is not received within the first 5 business days of the period.

Non-exclusivity
José Sanz and ZNAS maintain freedom to operate other projects simultaneously. Standard in fractional CTO engagements.

Renewal
In 3-month periods, by mutual agreement. Renewal terms and rate are renegotiated when that point is reached. A light follow-up retainer option exists for ongoing strategic guidance without active implementation, specific terms to be defined at that time.

Equity & Bonuses
No equity. No bonuses in first engagement (can be incorporated at renewal).

About CoPresent
José Sanz is co-founder of CoPresent, an AI-powered operational management platform. If during the assessment he recommends it as part of the solution, this relationship is disclosed upfront. The recommendation will be compared against market alternatives, and the CoPresent contract would be a completely separate transaction.

Professional Insurance
ZNAS LLC holds active Errors & Omissions insurance.

Confidentiality
All shared information is confidential. NDA available if required.

Intellectual Property
The proprietary algorithm developed for Alebrije during the engagement belongs 100% to Alebrije. ZNAS retains no rights over it.

.09 · Timeline

MONTHS 1-3

Headstart

Assessment + Digital Transformation Plan + first projects implemented + proprietary algorithm design

MONTHS 4-6

Build

Remaining quick wins + CRM consolidated + proprietary algorithm in development

MONTHS 7-9

Scale

Algorithm in production + advanced AI implementations + independence from third-party platforms

MONTHS 10-12

Autonomy

Integrated system at full capacity + continuous optimization + Alebrije team operating autonomously

At the conclusion of the 3 months, Alebrije will have the complete roadmap to continue the project independently. Should there be interest in continuing to work with José Sanz for the execution of subsequent phases, terms would be defined at that time by mutual agreement. It should be noted that this timeline represents a general overview of the project; specific timelines will be determined once the working arrangement is agreed upon and the comprehensive company assessment is completed, which will allow for a more precise projection of actual timelines.
