Engagement Position

# ZNAS × Anequim

**For Anequim Review**

July 6, 2026

---

Prepared by ZNAS LLC for Anequim

ZNAS LLC | Arizona, USA | Confidential

ZNAS LLC · Prepared for Anequim · July 6, 2026

This document outlines ZNAS LLC's position on the key terms of the engagement with Anequim in support of the launch and operation of Anequim One. It is a starting point for aligning on how the two teams will work together — the final Professional Services Agreement (PSA) will formalize these terms in a single instrument signed by both parties.

**Note on scope:** These terms assume the current technical direction that includes the client-facing portal. If the technical scope changes following the viability confirmation this week, the economic terms will be adjusted proportionally.

## 1. Engagement Overview

The engagement is anchored in one central technical deliverable, a client-facing portal built specifically for Anequim's customers, alongside supporting strategic and creative work streams. The complete scope includes:

- **Go-to-Market Strategy & Commercial Consulting:** ongoing strategic advisory for Anequim One
- **Marketing & Communications Materials:** creative consulting and production of commercial assets
- **Client-facing Portal:** the primary technical deliverable, built for Anequim's property manager clients
- **Technical Integrations:** currently identified as Kindred and Zoho, with additional integrations defined collaboratively as the project advances
- **Technical Consulting by Jose Sanz:** Forward Deployed AI Engineer, covering solution architecture, stack decisions, integration planning, and technical oversight

### Two distinct platforms

Throughout this engagement, we want to keep a clear distinction between two separate platforms:

- **Kindred's platform:** Anequim's internal tool. It handles the AI voice-to-voice technology and gives Anequim's own team direct visibility into that process.
- **The ZNAS portal:** a separate, client-facing product built specifically for Anequim's property manager clients, so they can see and manage what happens with their properties. This portal is the client-facing face of Anequim One, the interface through which Anequim's customers experience the AI-driven service Anequim is bringing to market. It's how Anequim's move into AI becomes tangible and visible to the people they serve, and how it translates into a differentiated product that adds durable value to Anequim's business.

The two connect via integration, but they are not the same thing. **MemQL**, ZNAS's open-source memory and reasoning platform, will serve as the backend of the portal ZNAS builds.

## 2. Scope of Work

### 2.1 Go-to-Market Strategy & Commercial Consulting

**Completed:** Full GTM document delivered from the Tucson working sessions (June 2026) — including ICP, value proposition, channels, and package structure.

**Ongoing:** Working sessions as needed, review of market results, and strategic adjustments as Anequim One begins operating with real clients.

### 2.2 Marketing & Communications Materials

**Completed:** Landing page proposal (subpage on Anequim's website, June 2026), promotional 1-minute video, and sales deck with Anequim branding.

**Ongoing:** Creative consulting and recommendations in coordination with Ana; iterations on existing materials and new pieces from joint work (one-pagers, follow-up decks, event materials, or any other assets the pipeline requires).

## 2.3 Client-facing Portal (Property Manager Console)

A client-facing web application built by ZNAS, giving Anequim's clients direct visibility and management capability over the AI receptionist activity happening on their properties. This is Anequim's commercial product interface, what Anequim sells as part of Anequim One.

The specific feature set will be defined collaboratively as discovery with Anequim's technical team progresses, and will incorporate AI-driven functionality as part of ZNAS's core value proposition.

## 2.4 Technical Integrations

Connection of the client portal to Anequim's existing technology stack. Currently identified integrations include **Kindred** and **Zoho**. Integration details, additional data sources, and the specific integration approach for each system will be defined collaboratively as the project advances.

## 2.5 Technical Consulting — Jose Sanz

Jose serves as the Forward Deployed AI Engineer for this engagement, providing direct technical consulting throughout: solution architecture, technology stack decisions, evaluation and integration of Anequim's existing systems, definition of the integration roadmap, and technical oversight of development.

## 2.6 Anequim's Cooperation

For ZNAS to deliver the portal and integrations on any reasonable timeline, Anequim's active cooperation is essential. This includes providing:

- API documentation and access credentials for Kindred, Zoho, and any additional systems identified during discovery
- Timely feedback, approvals, and decisions when ZNAS needs input to move forward
- Availability of key personnel (Jonathan, Jennifer) for discovery sessions and technical reviews
- Accurate and complete information about existing systems so ZNAS is not building on faulty assumptions

Project timelines are contingent on Anequim's timely cooperation. Delays originating on Anequim's side will shift the timeline accordingly.

# 3. Payment Terms

## 3.1 Monthly investment

The estimated monthly investment for this engagement is approximately **\$16,000 USD/month**. This figure represents full utilization of the ZNAS team across all service areas and serves as a reference ceiling — actual monthly amounts will vary based on the work performed, the stage of the project, and the deliverables required to meet Anequim's objectives at each point in time.

**\$16,000 USD / month**

Reference ceiling — actual billing is variable, time & materials

## 3.2 Billing structure

- **Frequency:** Bi-weekly (every 2 weeks, on alternating Fridays)
- **Invoice due date:** Net-7 (7 calendar days from send date)
- **Preferred payment method:** ACH or wire transfer
- **Structure:** Variable time and materials — each invoice reflects hours actually worked plus tools and infrastructure used during that billing period

## 3.3 First invoice

The engagement formally began with the Tucson working sessions (June 10–12, 2026), which were already invoiced and paid separately. The first invoice under this engagement will cover all work performed **from the end of those working sessions through the first invoice date**. Subsequent invoices will follow the standard bi-weekly cadence covering 14-day periods.

## 4. IP Ownership

ZNAS distinguishes between three categories of intellectual property in this engagement.

### 4.1 ZNAS core technology

- **MemQL** is open-source technology developed by ZNAS. Its use in the engagement does not transfer ownership to Anequim; Anequim has right of use within the scope of the contracted service.
- **CoPresent**, if incorporated into any part of the solution, remains the exclusive property of Visionarys LLC. Any use by Anequim would be governed by a dedicated instance license.

### 4.2 Client portal — shared ownership model

The client portal is developed and owned by ZNAS during the engagement, since ZNAS is the one building it. However, we want to propose a structure where Anequim builds real equity in the portal through the engagement itself:

50% of every payment Anequim makes to ZNAS during the engagement is credited toward Anequim owning a share of the portal.

The portal will be given a formal valuation during the engagement. Anequim's ownership percentage is calculated by dividing their accumulated 50% credit by the portal's total valuation.

**Illustrative example (numbers used purely to show the mechanism, not a commitment to actual figures):** If the portal is valued at \$100,000 and Anequim pays \$60,000 during the engagement, 50% of that payment (\$30,000) is credited toward ownership. \$30,000 out of \$100,000 = 30% ownership of the portal for Anequim. If Anequim wanted to fully own the portal at that point, they would have the option to pay the remaining \$70,000, or negotiate an alternative arrangement such as royalties.

A separate document accompanying this position paper provides ZNAS's estimated valuation of the portal as an IP asset, grounded in 2026 industry benchmarks.

### Why we believe this model works well for both sides:

- Anequim is not just paying for a service, you are building an ownable IP asset that adds value to your company. Owning proprietary software is one of the most direct ways to increase enterprise value.
- ZNAS retains ownership during development because we are taking the technical build risk. Both parties have alignment: ZNAS wants the product to succeed because we still own most of it, and Anequim wants it to succeed because your equity share grows more valuable as adoption grows.

### 4.3 Marketing and business deliverables — Anequim's property

Landing page, sales deck, GTM materials, and strategic documents created specifically for Anequim: once delivered and invoices paid, they are Anequim's property. ZNAS may reference them as portfolio work but will not commercialize them with third parties.

### 4.4 Anequim's pre-existing IP

All of Anequim's knowledge, client data, resident data, internal processes, and brand remain Anequim's property. ZNAS does not retain, use, or commercialize any Anequim data outside the context of the engagement.

## 5. Confidentiality

Our position is a **mutual (bilateral) NDA** — protecting both parties equally.

### What Anequim will not disclose about ZNAS:

technical details of MemQL and CoPresent, work methodology, pricing structures, engagement terms, discovery information, and the identity of other ZNAS clients.

### What ZNAS will not disclose about Anequim:

resident, owner, and client data; operational data and internal KPIs; commercial strategy and product roadmap; information about Anequim's technology stack; and economic terms of this engagement.

#### Base terms

The NDA remains in force during the engagement and for 3 years after termination. Coverage applies to employees, contractors, and subcontractors of both parties. Standard exceptions apply (information already public, known prior to the engagement, or received from third parties without restriction).

## 6. Termination

Either party may terminate the engagement with **30 days' calendar written notice**. No cause is required, this is an at-will engagement with a notice period.

### Work in progress upon termination:

- All work completed and delivered up to the termination date will be invoiced and paid under standard terms
- Work in progress at time of notice will be delivered to a reasonable state of advancement and invoiced
- Outstanding invoices will be paid within 15 days of the effective termination date
- Both parties will cooperate reasonably in knowledge transition during the 30-day notice period

**Immediate termination (without notice period)** applies only in cases of material breach without cure within 15 days, payment default over 30 days, NDA violation, or insolvency/bankruptcy of either party.

## 7. Liability & Insurance

### 7.1 Limitation of liability

ZNAS's maximum liability to Anequim for any claim arising from the engagement is limited to the total fees paid by Anequim to ZNAS in the **1 month preceding** the event giving rise to the claim.

Neither party will be liable for **indirect, incidental, special, or consequential damages** (loss of business, loss of data, lost profits), regardless of foreseeability.

The cap does not apply in cases of gross negligence, fraud, breach of the NDA, or intellectual property violations.

### 7.2 Active insurance coverage

ZNAS LLC maintains an active **Technology Errors & Omissions and Cyber Liability policy** with **\$1,000,000 USD in aggregate coverage**, including an AI Coverage Endorsement specific to artificial intelligence software. The policy is underwritten by an AM Best A-rated carrier.

- A **Certificate of Insurance (COI)** can be provided to Anequim upon request.
- Once the PSA is signed, Anequim can be named as **Additional Insured** on the COI. Being Additional Insured means that if ZNAS's acts or omissions cause harm to Anequim, Anequim has direct access to ZNAS's insurance coverage without having to pursue ZNAS directly.

## 8. Data Processing & Privacy

Because the portal will process Anequim's data (including resident PII) and integrate with third-party systems (Kindred, Zoho), a few points must be clear on both sides.

### 8.1 Responsibility for legal notices toward end users

Since the property managers are Anequim's clients (not ZNAS's), **Anequim owns the Privacy Notice and Terms of Use** that property managers see when they log in to the portal. Anequim's legal team drafts, owns, and updates these documents.

ZNAS is responsible for the **technical security** of the data within the portal (encryption, access controls, incident response).

### 8.2 Data processing license

Anequim grants ZNAS a limited license to access and process the data that flows through the portal — only for the purpose of operating, maintaining, and improving the platform. ZNAS will never use Anequim's client or resident data to train MemQL as a general-purpose model, nor for any purpose beyond powering this specific platform.

### 8.3 Third-party integrations (Kindred, Zoho)

Since ZNAS does not have a direct contractual relationship with Kindred or Zoho, the PSA will formalize that Anequim authorizes ZNAS to connect to these systems and that Anequim owns the relationship with these vendors. ZNAS is not liable for failures originating in Kindred, Zoho, or other Anequim-owned systems outside ZNAS's control.

### 8.4 Breach notification

In the event of any incident affecting portal data, ZNAS will notify Anequim within 24–48 hours of discovery. Anequim, as the party with the direct relationship to end users, would handle notifications to property managers and residents.

The complete Data Processing Agreement (DPA) will be included as an annex to the final PSA.

## 9. Governing Law & Independent Contractor Status

**Governing Law:** State of Arizona, U.S.A. Both entities operate in Arizona — a natural jurisdiction that creates no friction for either party.

**Dispute Resolution:** Binding arbitration under AAA Commercial Arbitration Rules or JAMS. Faster, less expensive, private, and allows selection of an arbitrator with technology expertise. Either party retains the ability to seek injunctive relief before Arizona courts for urgent IP or NDA breach matters, without waiving arbitration.

**Independent Contractor Status:** The PSA will include an explicit clause establishing that ZNAS LLC operates as an independent contractor of Anequim — not as an employee, agent, partner, or representative. ZNAS is responsible for its own taxes and expenses, and may work with other clients simultaneously (subject to NDA restrictions).

## 10. Information We'll Need From Anequim

---

Below is the information discussed that ZNAS will need to prepare the first draft of the PSA and properly issue the Certificate of Insurance. As agreed, we are on standby awaiting Anequim's confirmation on whether the engagement will include the portal — once that is confirmed, ZNAS will make any necessary adjustments to the terms and proceed with the PSA draft. If additional details come up as the PSA is drafted, we will follow up by email.

### 10.1 Legal and billing information

- Full legal name of the contracting Anequim entity
- Business email of the contracting entity
- Registered business address (street address, apt/unit/suite if applicable, city, state, zip)
- Name and title of the authorized signatory on behalf of Anequim
- Billing contact name and email (accounts payable)
- Preferred payment method (ACH, wire transfer, or check) and remittance instructions
- Whether Anequim uses a purchase order (PO) process, and if so, the PO number for this engagement
- Anequim's internal payment cycle (does Anequim process payments on specific days of the week?)

### 10.2 NDA

- Whether Anequim has a standard vendor NDA already in place that you prefer to use, or whether ZNAS should propose the NDA language as part of the PSA
