Fylo Warehouse OS — Your Investment, Explained

This document lays out exactly how you acquire, pay for, and grow the Fylo Warehouse OS. Our goal is complete transparency: what the platform is worth, what you pay today, what each future module looks like, and the flexibility you have at every step. Nothing here is designed to lock you in — it is designed to let you own a serious operational asset at the pace your business can support.

.01 · The Core Idea

The complete Fylo Warehouse OS is valued at \$225,000 USD. That is the value of the finished platform — the infrastructure that connects your entire operation, plus the four views you saw in the mockup (Manager, Station, Worker, and Customer Support), delivered in modules as your business grows into them. This number is fixed. It does not change based on how you choose to pay.

\$225,000

Fixed value of the complete Fylo Warehouse OS

You do not pay \$225,000 up front. Instead, you acquire the platform the same way a growing business acquires any major asset: you finance it, and you build it in modules. You activate each part of the system when your operation actually needs it, you finance only what you have activated, and you own each piece outright once it is paid off. This is a rent-to-own structure — ownership of each module transfers to Fylo when that module is fully paid.

The principle is simple: you never pay for a capability before your business is ready to use it.

.02 · What You Start With Today — Module 1

Your first step is the foundation of the system plus your Manager dashboard — the control panel you asked for in the demo. This is called **Module 1**, and it includes:

- The platform foundation — the technical infrastructure that connects Shopify, Amazon, your point-of-sale, and your other channels into one live system. This is the “plumbing” that everything else runs on.
- The Manager view (essentials) — your business at a glance on your phone: orders, revenue, average order value, revenue by channel, low-stock alerts, automatic point-of-sale inventory updates, and unfulfilled-order tracking.

Module 1 — Firm Pricing (as of July 2026)

Asset value of Module 1: ~\$67,000. Financed over your chosen term, with a 15% down payment (~\$10,050) that reduces the financed balance. These figures are firm and current as of July 2026.

Term	Down payment (15%)	APR	Monthly payment	Interest paid	Total financed cost
3 years	~\$10,050	15%	~\$1,974 / mo	~\$14,121	~\$71,071
4 years	~\$10,050	15%	~\$1,584 / mo	~\$19,074	~\$76,024
5 years	~\$10,050	15%	~\$1,355 / mo	~\$24,345	~\$81,295

Fixed 15% APR across all three terms. Interest is charged only on your remaining balance, so paying extra at any time reduces your total interest (see Section 4). The down payment (15%) is paid once at the start and is separate from the financed cost shown above; a larger down payment lowers the amount financed and your monthly payment.

How to read this: the longer the term, the lower your monthly payment — but the more you pay in total, because financing over more time carries a higher cost. A shorter term is cheaper overall; a longer term is easier on monthly cash flow. You choose the balance that fits Fylo.

.03 · How You Grow — The Roadmap

Once Module 1 is in place, the platform grows with your business. Each later module is activated only when your operation reaches the point where it genuinely needs that capability — never before. The values below show the complete roadmap so you can see the whole picture from the start.

Module	What it adds	Approx. asset value	When it makes sense to activate
Module 1 (today)	Foundation + Manager essentials	~\$67,000 (firm)	Now — what you need today
Module 2	Station + Worker — full floor system (monitor, tablet, scanning), plus the Manager upgrade it unlocks (live stations, leaderboard, bonus, real throughput & ETA)	~\$81,000	~15–20 orders/day, or 2+ people packing, or 3+ staff per shift
Module 3	Customer Support — essentials (single-channel inbox + basic returns), plus its “support at a glance” card on the Manager	~\$26,000	When you hire support, or handle 10–15+ messages/week
Module 4	Customer Support — full (multichannel + AI replies + labels/refunds + clinical assistant), plus its Manager insight card	~\$51,000	As support volume and clinical questions grow
Total	The complete Fylo Warehouse OS	\$225,000	—

A note on your Manager view — it grows with you. Think of the Manager as the cockpit of the whole system: the single screen where you see and control everything Fylo does. It is never a finished, separate module you buy once — instead, it grows automatically with every module you add. Module 1 gives you the cockpit as it looks today, powered by the data your business already generates. Then, each later module includes its own upgrade to the cockpit, built from that module's own data: when you add the floor system, your Manager gains the live stations, leaderboard, bonus calculator, and real throughput; when you add support, your Manager gains its customer-support view. That's why the cockpit isn't a line item on its own — keeping it current with your operation is included in each module. Your Manager never falls behind your business, and you watch the system get richer as you grow.

Why later modules are shown as estimates — and firmed up at activation

The values above for Modules 2 through 4 are directional estimates to show you how the roadmap works and what the full journey looks like. They are not yet locked in. Here is why, and it works in your favor:

Only Module 1 is priced firmly today, at July 2026 market conditions. For each later module, the exact APR and monthly payment are set at the moment you decide to activate it — through a fresh assessment against market conditions at that time. Financing rates move with the broader market; rather than lock you into today's rate for a purchase you might make two years from now, we re-assess at activation so your terms reflect the real conditions of that moment. When you signal you're ready for the next module, we present you the firm APR and monthly payment for it, and you decide with full information in hand.

This means the roadmap gives you a clear, honest map of the whole journey, while keeping each future decision fair and current rather than frozen in time.

.04 · Your Flexibility — Down Payment & Early Paydown

The structure is built to flex around your cash flow, not the other way around. Two levers are always available to you:

A larger down payment lowers your cost. The 15% shown is our standard starting point. If you choose to put more down, your financed balance is smaller from day one — which means a lower monthly payment and less total interest over the life of the term.

You can pay extra at any time, with no penalty — and it saves you money. Because interest is charged only on your remaining balance, every dollar you pay above your scheduled monthly payment reduces the interest you'll owe and shortens your term. Suppose you choose the 5-year term, and a year or two in your business has grown and you'd like to put down a significant lump sum — you can, and it immediately lowers your total interest. You then have two choices: keep your monthly payment the same and finish earlier, or, if you'd prefer cash-flow relief instead, we will **re-amortize** (recast) your note at no charge — recalculating a lower monthly payment over the remaining term at the same rate. Either way, paying early always works in your favor, and there is never a prepayment penalty.

You can also buy out any module in full at any time — paying the remaining balance stops all further interest from that point forward, exactly like paying off a loan ahead of schedule.

.05 · How Ownership & Protection Work

Because we are financing this for you directly, a few straightforward protections apply — the same kind any financed asset carries:

- The \$225,000 value is fixed and never renegotiated. Only how you pay it flexes.

- You own each module once it is fully paid. Until then, ZNAS retains title to that module — the same way a financed vehicle belongs to the lender until the final payment.
- Each major new capability may adjust the platform's value. As the system grows well beyond the current scope, its value can be reassessed together.
- A personal guarantee and standard security interest support the financing, to be formalized in the signed agreement.

.06 · The Legal Footing of This Financing

Because ZNAS is financing this purchase directly, we want the legal ground under the arrangement to be as clear to you as the numbers themselves. This section explains, in plain terms, why the structure is sound and enforceable.

The financing is set up as a commercial, business-purpose acquisition: Fylo acquires the platform as a business, and Carlos Valenzuela stands behind the agreement with a personal guarantee. Both ZNAS and Fylo are based in Arizona, and the agreement is governed by Arizona law. On that footing, a fixed 15% APR agreed in writing is fully permitted, because Arizona sets no ceiling on an interest rate the parties agree to in a written contract. A one-time, seller-financed sale of software between two businesses does not require any special lender licensing, and because the purpose is commercial rather than personal, the arrangement sits outside consumer-credit disclosure rules.

None of the above is legal advice, and we encourage you to have your own attorney review the final signed agreement. Our aim is simply for the legal structure to be as solid and transparent as the financing behind it.

This document is a good-faith commercial proposal for discussion, not a formal financing agreement or legal instrument. Module 1 figures are firm as of July 2026; all later-module figures are directional estimates, re-assessed at activation against market conditions at that time. We recommend review by your own legal and financial advisors before signing. Final terms are formalized in a single signed agreement.
